

I am very concerned about the interference that Broadband over Power Line (BPL) will have to other users of the radio spectrum. The American Radio Relay League, Inc. (ARRL) has documented the interference BPL causes to reliable reception of radio frequencies and I find that the level of interference is equivalent to spectrum pollution. As a licensed primary user of the amateur radio frequencies, I feel that the degradation that is caused by BPL is counter productive to the objective of amateur radio.
